

Outlook

In the future, upholding the philosophy of innovation, coordination, green development, opening up and sharing, we will expand mutually beneficial cooperation with industry peers around the globe as their preferred partner. We will continue to transform the mode of producing and utilizing energy, promote energy consumption in a low-carbon and efficient way, and vigorously develop our natural gas business, to supply quality and clean energy on a global scale and support inclusive and sustainable socioeconomic development.

We value the Myanmar market and cherish the achievements made in the project through joint efforts. Based on the Bangladesh-China-India-Myanmar (BCIM) economic corridor project, we will continue to work with our partners to ensure the safe and stable operation of both the crude oil pipeline and gas pipeline, in order to deliver high-quality energy to Myanmar and facilitate local economic and social development. Meanwhile, we will push forward our efforts in environmental protection, honor our commitment to “green and clean development”, and promote harmony between people and nature.

Along with the operation of the project, we will employ more local staff and cultivate more professionals and management personnel, and facilitate their development through this platform.

We will make the utmost efforts to meet oil and gas demand in the Myanmar market. In addition to running the Myanmar-China Oil & Gas Pipeline Project, we will enhance our cooperation in the energy sector, promote the utilization of natural gas, and better serve local economic development with clean energy.

Upholding the principle of “Mutually beneficial cooperation for common development”, we will actively communicate with our partners and stakeholders, take the economic development programs of the areas along the pipelines into full consideration, and promote public welfare in a systematic, sustainable and planned manner. We will continue to improve education and medical care as well as infrastructure development, such as water, electricity, telecommunications and roads along the pipelines, in order to bring more real and tangible benefits to people in the local communities.
